July 14, 2009

Dear Professor Li,

It was very nice to meet you and your two undergraduates Mr. WILCOX Andrew and Mr. HERMAN Aaron during your visit to The University of Hong Kong from June 29, 2009 to July 11, 2009. I was really impressed by the short presentations given by both students. It was clear to me that they have fully understood what they were presenting and able to give clear and organized presentations. I also believed what they were working on may lead to interesting results in preserver problems and error-correcting code problems under your supervision.

I think it is very good for these students to have the chances to talk to a number of people and visitors in our department, especially they can learn some other research topics related to matrix theory. In conclusion, I have no doubt that your students are promising and the visit would certainly benefit them a lot.

With best regards,

Dr. Ng Tuen Wai  
Associate Professor  
Department of Mathematics  
The University of Hong Kong
