

The Interdisciplinary Studies Program in Neuroscience & the Government Department are proud to present:

The 2006 Neuroscience Fall Symposium...

Crossing time and discipline, neuroscience research has progressed from the neuroanatomical work of Christopher Wren, to today's modern efforts to understand the origins of thought. Please join us for an afternoon which will showcase the work of our students and examine how far neuroscience can go.

A functional brain imaging (fMRI) composite indicating the neural substrates of political cognition and affect

Keynote Address:

**Humans are, by Nature,
Political Animals:
New Evidence and Arguments.**
