

Virginia Port Authority – Warehousing And Logistics Forum 9/25/09

- Online Tools available at the VPA's website:
 - You can find a list of the new, speculative development projects on our website with a location map and flyers for all of these projects: www.portofvirginia.com
 - In addition, we keep a listing of third party logistics firms that can provide not only the transportation, but value added services, stuffing and stripping of containers, storage, packaging, security, and distribution. This allows large and small companies alike the option to focus on their core business, producing and selling their products instead of worrying about their supply chain. In addition, this list allows smaller companies the ability to utilize public warehousing thus minimizing costs and maximizing reach to new markets.
 - The port also keeps an extensive list on the website of available warehousing for lease as well. With the help of the industrial real estate community, we have compiled a list of warehouses that are available in full, can be subdivided, or in many cases subleased in our market.
 - Finally, we have launched our newest tool, an interactive site selection tool, in August. This allows the web user to filter through available warehouses for lease or sale as well as available land. The data for this tool is housed and maintained by the VEDP. It is our hope to reach the many consultancy firms and on-line researchers that are qualifying areas for their next manufacturing or distribution location.
