

Setting Up Your E6400 Out - of - the - Box

Here are some simple, but important steps for using your Latitude E6400 for the first time.

Setup only takes about 20 minutes so stay with your E6400. Otherwise, step 4 will run automatically setting a random administrator password and you will be unable to log on.

1 Unpack your notebook, plug in the power supply, and turn it on.

2 You will get a Windows Vista Ultimate license agreement screen. Check box next to I Accept and click **Next**. Enter computer name and click **Next**. At the Thank You screen click **Start**.

3 After you notebook has restarted, you will be presented with a screen to create a user account and password for you computer. Enter a user name without space (e.g., Robert), a full name (e.g. Robert Harper), and a password. Be sure you password meets the criteria indicated. Click **Create Account**. At this time Sophos Antivirus will be installed and your computer will restart automatically.

4 After this restart, you will get a log in screen. Click in the Password box and enter the password you just created. Press the **Enter** key. Once completed you will be logged on.

5 If your computer is connected to a network (wireless users see the right column) you will be prompted shortly with Windows Updates to install.
