

# STUDENT NEWSLETTER

**David Specht**, a junior at William and Mary majoring in Physics, spent some time in our lab this month analyzing his diatom samples. David's samples were collected by the York River Algae Project, and his work involves characterizing the samples that are being grown and studied for algae-based biofuel applications.

**Ilho Nam**, a graduate student in the Department of Electrical and Computer Engineering at Old Dominion University, is pictured here analyzing his samples with the Surface Profiler. Ilho is investigating photolithography patterns on glass under the direction of Dr. Namkoong.

**Lopamudra Das**, a William and Mary graduate student under Dr. Kelley, has been a frequent visitor to the lab. She continues her research of replica samples and is pictured here using the Atomic Force Microscope.

*Happy Thanksgiving*
