

COMPLIANCE PAGE TEMPLATE

As stated in the Graduate Program Catalog section entitled “Institutional and Federal Compliance Requirements”, graduate students cannot begin certain types of research (work involving human subjects, radioactive materials, vertebrate animals, recombinant DNA, infectious agents, any human fluid or tissue, or direct or indirect contact with wild-caught animals that may harbor infectious agents) until the faculty research advisor has submitted a proposal to the appropriate W&M compliance committee(s) and has received written approval.

Every A&S graduate student must provide a **Compliance Committee form** as a separate form (not inserted into the thesis or dissertation) submitted to the Office of Graduate Studies and Research along with all required documents due by the published Final deadline. The Compliance Committee form must be signed by the student and the faculty research advisor, certifying that either (1) the research does not involve the above types of research, or (2) the research has been approved by the appropriate W&M compliance committee(s).

If the graduate student’s research involves the above types of activities, the final of the thesis or dissertation must include a completed **Compliance Page template (see below)** as a required page of the thesis/dissertation.
