FEATURED FACULTY LECTURES
Saturday Oct. 28 | 10:45 – 11:30am | Various Locations

**Authentic Excellence 201**
**Presented by Dr. Kelly Crace representing Health & Wellness**
*ISC 1127*

During Parent & Family Orientation, a concept was introduced that distinguished fear-based excellence from authentic excellence. This session will explore this concept at a deeper level and describe a training program intended to develop flourishing and resilience. It will also examine the six paradigm shifts necessary for effectively managing fear of failure. For those who didn’t attend the introductory session at Orientation, a brief review will be provided at the beginning.

Presented by Dr. Kelly Crace, Associate Vice President for Health & Wellness and Director of the Center for Mindfulness & Authentic Excellence (CMAX).

**Human Rights and Justice: Challenges and Opportunities**
**Presented by Dr. Kelebogile Zvobgo representing Arts & Sciences**
*Small 110*

Dr. Zvobgo is the founder and director of the International Justice Lab at W&M's Global Research Institute. She will discuss both emerging and abiding challenges to human rights and justice in the 21st century and how she and the W&M undergraduates in her lab are bringing novel data and methods to bear on these pressing issues.

**Shakespeare and Forgiveness**
**Presented by Dr. Erin Minear representing Arts & Sciences**
*Tucker 127A*

My current research explores the social, theological, and political implications of forgiveness in Shakespeare's plays. Who gets forgiven and who does not? What actions and behaviors require forgiveness? Who has the standing to forgive? And finally, to what degree does Shakespeare himself require—or deserve—forgiveness from modern audiences?

**Water, water, everywhere—sea level rise and the impacts of accelerating flooding**
**Presented by Dr. Molly Mitchell representing the Virginia Institute of Marine Science (VIMS)**
*McGlothlin Street 20*

As sea level rises, flooding accelerates, which impacts the communities that live on the water and the ecology of our coastlines. We will explore the drivers behind this increase in flooding and how it is changing both around the USA and within the Chesapeake Bay. We will examine how these changes are affecting our coastal resources and communities and how can we adapt to rising sea levels in ways that maximize the sustainability of both the natural and human uses of our coastline.
You Live, You Learn: The Importance of Lifelong Learning for Individuals with Developmental Disabilities
Presented by Dr. Heartley Huber representing the School of Education
Andrews 201

Lifelong learning is a right many of us take for granted, but for individuals with developmental disabilities, learning opportunities as adults are often elusive. We will discuss some of the barriers faced by people with developmental disabilities as they transition from school-based learning to adulthood and ways we can support and ensure opportunities for lifelong learning for everyone. I will share information about the Next Move@W&M Program and how I am using this program to address these issues in our community.
