

Lab Work

During December and January the WM ARC lab team worked with Soluble Solution's TheraGauze. Pictured here is an example of one set-up we used during the experiments.

Nick and Amy using the Hirox Microscope for the TheraGauze project.

SPM Maintenance

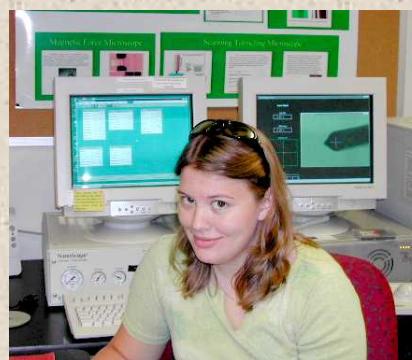

Natalie and Amy getting ready to perform maintenance on the Scanning Probe Microscope

William and Mary ARC Labs Bid Farewell to Natalie

Pictured here with Natalie are former WM Grad students Dee Dee Hopkins & Shannon Watson.

Natalie Brock, a long time WM employee and friend, left this month to start her new career as a Nuclear Engineer with Northrop Grumman Newport News Shipyard. Natalie started with us right after high school and stayed throughout college, where she completed her BS in Physics. From all of us at the ARC Labs we wish her the best!
