New HIROX Lens:

The New Year also brought new equipment to the lab. Nick is pictured here pointing to the new HIROX lens attachment that enables automatic calibration.

Lab Visitors:

Nick provided assistance to Jefferson Lab's Kevin Jordan and John Musson with using the Phenom microscope. Kevin brought his samples of boron nitride nanotubes for analysis.

Lab Visitors:

Osei Amponah, a Norfolk State University Ph. D. candidate, brought samples of ZNO nanorods on conductive glass to the lab. Brandt is pictured here providing assistance on the FESEM.

Olga provided assistance to Meric Arslan, a Norfolk State University graduate student, with examining his ZNO nanorods under the FESEM.

January brought some very special visitors to the lab. Amy's son Mike is pictured here with his fiancée Nadine along with Nick and Olga. You might remember Nadine as the daughter of former Jefferson Lab Chief Scientist and Theory Group Leader Tony Thomas and William and Mary Visiting Scientist Joan Thomas. Nadine traveled from Australia to spend the holidays with Mike and his family.
