## Boys and Girls Clubs Demo – April 1, 2015

On April 1<sup>st</sup>, Amy, Reed and Nick returned to the Suffolk Unit of the Boys and Girls Clubs of Southeast Virginia located at John F. Kennedy Middle School. A new group of 15 students participated in this demonstration as part of Amy's "Fill the Gap" grant project to promote STEM concepts.

Reed and Nick are shown here presenting a refined PowerPoint on 3-D printing. The presentation included an explanation of fabrication processes with the applicable engineering concepts defined and the required safety guidelines for high temperature operation outlined.

At the conclusion of the presentation, the student were very interested in the 3-D model Nick removed from the printer.
